

Write a Java program to find maximum repeated words from a file.

```
import java.io.BufferedReader;

import java.io.FileReader;

import java.util.ArrayList;

public class MostRepeatedWord {

    public static void main(String[] args) throws Exception {

        String line, word = "";

        int count = 0, maxCount = 0;

        ArrayList<String> words = new ArrayList<String>();

        FileReader file = new FileReader("data.txt ");

        BufferedReader br = new BufferedReader(file);

        while((line = br.readLine()) != null) {

            String string[] = line.toLowerCase().split("[,\\.\\s]+ ");

            for(String s : string){

                words.add(s);

            }

        }

        for(int i = 0; i < words.size(); i++){

            count = 1;

            for(int j = i+1; j < words.size(); j++){

                if(words.get(i).equals(words.get(j))){

                    count++;

                }

            }

        }

    }

}
```

```
}

    if(count > maxCount){
        maxCount = count;
        word = words.get(i);
    }
}

System.out.println("Most repeated word: " + word);

br.close();
}
```

Output:

```
Most repeated word: computer
```
